

**FOR IMMEDIATE RELEASE**

## **Fogco Systems Adds Programmable Microprocessor to Custom Fog Pumps**

**Chandler, Arizona:** Fogco Systems Inc., a manufacturer of high pressure mist and fog systems for industrial, commercial, and residential markets, is pleased to announce a new capability to their custom fog pumps, a programmable microprocessor (PLC). The new PLC feature improves system automation and tracks various aspects of operation to ensure the best results while increasing the functionality of the pump overall. As a further advancement, the custom pumps now feature colored lights that provide real-time feedback regarding the operation and maintenance of the pumps.

For customers, being able to custom program each pump sequence and control specific fog system functionality leads to improved performance and desired results. The provision of maintenance related messaging and the illumination of colored indicator lights that provide instant feedback with regards to the pumps operation allows for better tracking of functions.

In their 25 year tenure as designers and manufacturers, Fogco Systems has remained committed to continual product development and improvement by providing the highest quality purpose built equipment in the industry. By adding the new PLC system capabilities to their custom pumps, their history of striving for ease of use, product value and efficiency for their customers continues.

Anyone interested in learning about Fogco System custom fog pumps and the company's next steps towards product advancement can find out more by visiting the [Fogco Systems](http://Fogco Systems) website or by calling 1-480-507-6478.

**About Fogco Systems:** The [Fogco Systems](http://Fogco Systems) manufactured product range includes standard and custom pump designs of high pressure mist, dust control products and fog systems . Fogco's specialty designed systems utilize customized high pressure pumps, fittings, and components to take advantage of the natural properties of water and create solutions for many different industrial, commercial, and agricultural applications. Experienced design staff members help customers find the most appropriate solution utilizing the power of fog and the natural properties of water.
