

REVOLUTION **II**

PERFORMANCE UNDER PRESSURE

REVOLUTION® II

The Revolution II misting fan is a smaller version of the Revolution and provides improved evaporative cooling and humidification. Its unique design allows a more uniform distribution of the fog and improved absorption of the moisture.

By intergating a focused horizontal air stream into the fog, the water droplets can cover more area. This allows the mist system to cool or humidify up to 5 times the amount of air compared to static line misting systems.

APPLICATIONS

- Greenhouses
- Germination Chambers
- Printing
- Paper products
- Wood working
- Electronics
- Textiles
- Clean rooms
- Hospitals

SPECIFICATIONS

- a fraction of the operating cost of traditional basket fans
- provides 360 degree distribution of the fog
- covers up to 900 square feet
- low operating noise level
- available in 115V/230V and 50Hz/60Hz
- .23 amps at 115V
- 250cfm
- includes a 6 nozzle stainless steel fog ring
- includes 10' of 18 gauge insulated power cable
- includes 10' of 1/4" flexible feed line and terminates with a 1/4" MNPT fitting.
