

**ELIMINATE ALL
CONCERNS DUE
TO ODORS**

Cannabusters is
odorless and VOC free

ODORLESS ELIMINATION TECHNOLOGY

Introducing the Industry's First 24 / 7 Odor
Monitoring, Reporting & Adjusting System

EXHAUST FANS

ROOF / RIDGE / SIDE VENTS

EXTRACTION / DRYING

OUTDOOR CROPS

HOW IT WORKS

Cannabusters' patented formulation is atomized into exhaust air streams resulting in direct contact with odor molecules. The reaction between the formulation and odor molecule results in complete elimination of odors. Newly developed, cutting-edge technology allows for this to be implemented into a self-monitoring, reporting and adjusting system capable of autonomous operation.

FACTS

Tested and proven by a professional Engineer and Certified Industrial Hygienist as best available control technologies (BACT).

NO additional VOCs or residual oils/smells like other systems such as Vapor Phase, or those that use Enzymes or Fragrances for masking agents.

Tested by an independent laboratory proving complete elimination of odor molecules.

APPLICATIONS

Greenhouses

Whether positive or negative pressure, exhaust fans, roof/ridge/side vents or both, Cannabusters' delivery systems eliminate odor on contact.

Extraction / Drying Facilities

Odor is eliminated at exhaust points.

Distribution or warehousing

Wherever cannabis odor issues are, Cannabusters eliminates them.

Outdoor crops

Cannabis and hemp outdoor field odors are eliminated at the perimeter line.

...and much more!

IS CANNABUSTERS SAFE?

100% yes!

Multiple health and safety studies from independent sources attest to Cannabusters' safety. All are available on request.

Safe for people, plants, and the planet

Eliminate odors

Value to Your Business

Easy to Use

100% Safe

No residual fragrance, not a vapor phase system, just no odor!

Why deploy Cannabusters® with high pressure fog by Fogco

- Autonomous sensing, dosing, and reporting system.
- Independently tested and verified.
- Municipality and regulatory approved technology.
- More cost effective and efficient than other odor control solutions.
- Nontoxic, environmentally friendly and biodegradable with no contamination impact.

How High Pressure Fog Works to Control Odor

Scientifically developed, patented and independently tested, Cannabusters® is injected into the water supply which is then pressurized to 1,000 psi to create fog. It's delivered via high pressure fog nozzles that are installed wherever odor treatment is needed, including on the exterior of your vents or ducts. When the fog containing the Cannabusters® and the airborne odors mix, a chemical reaction occurs that completely neutralizes the odor escaping the facility.

Why Fogco for Your Odor Control Solution?

Fogco is the high-pressure fog industry pioneer, having been in business since 1989. Fogco has developed a proven solution to the cannabis industry's biggest challenge, odor control. Fogco's system has been independently tested and verified to provide odor mitigation.

Over the years, Fogco has provided complete odor control systems covering millions of square feet of production and storage at facilities worldwide. Fogco was the first to eliminate cannabis odor through the use of fog and has partnered with growers, manufacturers, consultants, warehouses, and others within the cannabis industry to provide total odor elimination.

Fogco will customize an odor control solution for your business that will meet regulatory requirements, allowing you to avoid costly delays and potential shut downs. Fogco does it all, from small facilities to the largest commercial grow facilities, and everything in between. Trust the industry leader to solve your odor concerns so you can focus on your business.

Tested. Trusted. Deployed in millions of square feet.

Odor Mitigation Technology

The industry's first automated sensing, dosing, and reporting system

Fogco offers a broad range of 1000-psi high pressure misting systems to be used for odor control. From our economical direct drive pump to our fully customized units, all of our mist pumps are built with high-quality components and have a proven track record of over 30 years.

This range of pumps can also be equipped with an optional high-pressure safety switch, a variable frequency drive, PLC controls, and can be integrated into the automation of any building maintenance system. These upgrades make the Fogco range of pumps the most protected and highest rated pumps on the market. **Fogco backs that up with our industry-leading 5-year warranty!**

The Fogco system can utilize stainless steel or nylon tubing. The most versatile and convenient of these options is our high pressure flexible nylon and proprietary slip lok fittings. This option allows for on-site assembly and the ability to remove and reassemble individual fittings at any time without the need for special tools. The nozzle fittings can also be rotated on the nylon tubing allowing for changing the direction of the mist from each individual fitting. This flexibility allows for on-site "fine tuning" versus competitive systems that are permanent after installation.

Over the last 30 years, Fogco has developed an extensive range of tubing and fittings exclusively for mist and fog system applications. The options include robotically welded stainless steel in 10 foot or 20-foot lengths or flexible nylon (up to 500' lengths) and slip lok fittings. With the addition of an injector and introducing a proven odor solution, a highly effective equipment package is available for Fogco to help resolve any of your odor concerns.
